ACKNOWLEDGEMENTS

The Healthy Child Care Colorado Initiative is supported through local, state, and national partnerships to promote health, safety, and wellness best practices in early childhood settings and systems. Since 2001, Healthy Child Care Colorado has served as the statewide hub for Child Care Health Consultants by providing ongoing support, training, and resources for those medical professionals serving children in early childhood settings.

We wish to recognize the following people for their contributions of time and expertise to the development and review of the Second Edition of the Colorado Child Care Health Consultation Competencies:

CONTRIBUTORS and REVIEWERS

Jennie Albietz, BSN, RN, CPN

Kim Bacon BSN, RN, CPN

BACKGROUND & RATIONALE

Healthy Child Care Colorado partnered with statewide experts to develop this set of competencies for the practice of Child Care Health Consultation in Colorado. Competencies are an essential part of a professional development system because they provide a common set of standards, clear definitions about what knowledge is needed to provide quality services and serve as a solid foundation for practitioners.

These competencies outline best practices for child care health consultation in Colorado, ensure consistent practice of those serving in this role, and provide a tool for annual self-reflection and professional development. Child Care Directors may find these valuable in understanding the Child Care Health Consultant (CCHC) role, creating job descriptions, and as an evaluation tool for annual and ongoing assessment of their CCHC. You are encouraged to use the electronic copy of this document since it includes active links to resources, rules, and training sites.

Why use core competencies for child care health consultation?

- Provide clear definitions on what CCHCs need to know and do to assist programs in meeting and exceeding basic health and safety requirements in early childhood settings.
- Essential part of a comprehensive professional development system.
- Support professionalism for this unique and critical role by serving as the foundation for practitioners to understand their role, examine their strengths and areas for growth, and outline opportunities to enhance their practice.

The structure of these competencies includes four levels of competence, like Patricia Benner's Nursing Theory, *From Novice to Expert*. They begin with basic skills and knowledge needed to enter the role and go to an advanced level of academic preparation and wide range of experience. The four levels are cumulative, meaning practitioners working at a level 4 have the skills and knowledge to meet all the competencies at levels 1, 2, and 3. Advancing through the levels is done by obtaining further education, training, mentoring/coaching, implementing best practices, and reflective practice.

Healthy Child Care Colorado serves as the statewide hub for Child Care Health Consultation in Colorado. We work on the local, state, and national level to strengthen awareness and support for this unique and critical role. We collaborate to provide the following support, training, and resources to the network of CCHCs:

- Ongoing training and technical assistance related to the CCHC role
- Regular informational webinars and seminars on relevant health and safety topics
- Email forum and regular newsletters
- Health Hub Resource Center – online resource library with best practice resources, materials, articles, templates, professional development information, and more

REQUIREMENTS FOR THE CHILD CARE HEALTH CONSULTANT

All licensed child care centers, preschools, and school-age programs in Colorado are required to have a minimum of one monthly visit from a Child Care Health Consultant – a medical professional who assists the program in meeting and exceeding basic health and safety standards. Family Child Care Homes are required to have a CCHC when delegation is needed. CCHCs have a unique and critical role in supporting the health, safety, and wellness of children in early childhood settings.

Child care health consultation in Colorado is delivered in various ways. Consultants are self-employed or are hired by hospitals, local public health agencies, schools, Head Start programs, and more. The value of the CCHC to the licensed program they serve is dependent upon the competency of the CCHC. Ongoing professional development contributes to the quality and safety of the nursing and medical practice within early childhood programs.

CCHCs must hold a current Colorado license as a registered nurse, pediatric nurse practitioner, family nurse practitioner, or pediatrician with knowledge and experience in maternal and child health. CCHCs are also required to:

- Attend Child Care Health Consultation 101 training
- Complete annual immunization training
- Provide the early childhood program with documentation of their current medical/nursing license, biography, and training certificates
- Conduct and thoroughly document the monthly consultation that is specific to the needs of the program

CCHCs provide the legally required transfer of authority, known as delegation, so trained early childhood staff may administer medications and implement special health care procedures for children in their program. They also serve as a guide to the program's administration, staff, children, and families to more effectively integrate health, safety, and wellness related information and evidence-based practices.

The Child Care Licensing rule for center-based child care is below. 7.702.45C

1. Staff must consult with a currently Colorado licensed registered nurse with knowledge and experience in maternal and child health, a pediatric nurse practitioner or a family nurse practitioner, or a pediatrician at least once a month at the child care facility. The monthly consultation must be specific to the needs of the facility and include some of the following topics: training, delegation and supervision of medication administration and special health procedures, health care, hygiene, disease prevention, equipment safety, nutrition, interaction between children and adult caregivers, and normal growth and development. In part day preschools that operate less than five (5) hours per day or drop-in child care centers, consultation must occur as often as the nurse delegating medications requires.
2. The date and content of each consultation must be recorded and maintained in the center's files.
3. The center must maintain documentation including the Child Care Health Consultant's (CCHC) Department of Regulatory Agencies (DORA) proof of RN or MD current licensure in good standing, a brief biography highlighting applicable knowledge, experience and approximate dates worked as a school nurse or child care health consultant commenced.

4. Child Care Health Consultants (CCHC) hired after February 1, 2016, must complete the Department approved Child Care Health Consultant (CCHC) training within six (6) months. The center must obtain and maintain proof of course completion. CODE OF COLORADO REGULATIONS 12 CCR 2509-8 Social Services Rules 45.
5. Child Care Health Consultants (CCHC) employed as a health consultant prior to February 1, 2016, must complete the Department approved Child Care Health Consultant (CCHC) training by August 1, 2016. The center must obtain and maintain proof of course completion.
6. All Child Care Health Consultants (CCHC) must complete the Department approved Colorado Department of Public Health and Environment (CDPHE) immunization course annually, found at [Colorado Shines PDIS](#).

There are many other non-regulatory requirements needed to fully and safely serve in this role for licensed early childhood programs in your community.

COMPETENCY LEVEL DESCRIPTIONS

Level 1: The foundation of basic skills and knowledge to best support quality child care health consultation within the child care setting. *According to Benner's concept, the novice is a beginner with no experience, mostly following instruction. The advanced beginner shows acceptable performance and has gained prior experience in actual nursing situations. Principles begin to formulate to guide actions.*

Level 2: Applying skills and knowledge to plan and implement quality child care health consultation activities and experiences within the child care setting. *According to Benner's concept, a competent nurse has around 2-3 years of experience in their role, is more aware of long-term goals, and gains perspective from planning their own actions, achieving greater efficiency and organization.*

Level 3: Creating healthy and safe early learning and development environments and guiding others to promote policies, procedures, and best practices that are optimal for the health and safety of young children. *According to Benner's concept, the proficient nurse perceives and understands situations as whole parts. They learn from experience what to expect in certain situations and how to modify plans as needed.*

Level 4: Advancing the field of child care health consultation by providing leadership through advocacy, teaching, and mentoring. *According to Benner's concept, expert nurses have a deeper background of experience and an intuitive grasp of clinical situations. Their performances are fluid, flexible, and highly proficient.*

Use the competency chart below to reflect on your practice, skills, and ongoing professional development by conducting a self-assessment of the levels you are at in each category.
